

Are you aware of these facts about Employee use of the Internet today?

- **1 in 5 men & 1 in 8 women admit using their work computers to access sexually explicit material online.**
- **To avoid Hostile Workplace & Sexual Harassment claims EEOC makes the following recommendations for employers:**
 - Prevention is the best tool
 - Have an Internet Acceptable Use Policy
 - Use available tools to detect, deter, record and alert management to unacceptable behaviors.

MANAGE YOUR EMPLOYEES INTERNET USE AND ENFORCE ACCEPTABLE USE POLICIES

Manage your employee's Internet use and increase profitability by reinforcing your organization's Acceptable Use Policy while filtering, blocking, monitoring, and reporting non-compliance.

Phalanx™ is a simple to install hardware device that sits at your gateway to the Internet. It includes a **Monitoring & Alert Service** which together continuously look for Objectionable Content by dynamically analyzing and filtering Internet websites, as well as, Instant Messages (IM) between individuals and chat rooms on social networks like MySpace™, Friendster™ and Xanga™.

Could your employees using your IT infrastructure to solicit children on the Internet? The **Monitoring & Alert Service** analyzes every word and phrase while comparing them to known words and phrases commonly used by Predators. When a potential problem is detected, an Alert can be sent to the business manager or HR advising them of the incident.

Phalanx™ blocks Objectionable Content **BEFORE** your employees ever see it! User reports are available to administrators providing detailed information on their employee use empowering them to make better assessments of the Internet

We deliver this product to you from our experience as business professionals with diverse backgrounds in **Internet Security Technology, Information Security for the Financial Services Industry & the Olympics**. We have joined forces to create a unique and innovative patent pending product to protect businesses, schools and families against Internet crime, pornography, and objectionable or inappropriate word content.

What you don't know about your employees Internet use could put your business at risk!!

Help is now available through a new security system called the **Phalanx™**.

Phalanx™ is a simple to install device that easily connects between your high-speed modem and your business or a schools computers. All Internet use can be protected with a single device, unlike software. Windows®, Vista®, Mac and UNIX operating systems are supported. **Protects from 1 to 1,000 computers.**

Key Features:

- Increases employee productivity, conserves network bandwidth costs, reduces legal liability & adds an extra layer of essential security features to the network.
- Easy to use administrative controls for setting content filtering levels.
