Specifications

... Capacity	160, 200, 250, 300 or 400 GB
... Interface	USB 2.0 or Firewire
... Speed	7200 rpm with 8 Mb cache

A Member of the "Defense in Depth" System

Features — "stand it or stack it"

- Easy to use, plug & play
- All data on the hard drive is encrypted for security & privacy
- Choose "push button" or automatic backup software to effortlessly safeguard files
- Hot swappable, connect & disconnect without turning off your computer
- Designed to look great on any home or office desktop

This external hard drive features lightning-fast USB 2.0 or Firewire for high-speed data transfer.. For fast, secure and dependable performance the Sentry Data Backup Module is an ideal investment.

One of the critical factors every business must address is "Continuity of Business". It is not only a best business practice, in many circumstances, depending on the business, it is required by state and/or federal regulation. Those regulations include **HIPAA, Gramm-Leach-Bliley (GLB) and Sarbanes Oxley (SOX), CISP and PCI**. What does continuity of business consider?

- Daily Back-up of Data
- Off-Site Data Storage
- Protection of Data i.e., **Encryption**, to Safeguard Privileged and Confidential
- Information, During the Process of Off-site Transportation and Storage by Staff or Third Parties.
- Ability to Quickly Recover Data in the Event of a Disaster

These can be onerous requirements but a convenient and easy solution is available with the **Sentry data back-up module**. This module requires a Sentry already in place or installed at time of purchase.

There are many solutions for mass storage of data but Sentry's Data Back-up Module not only solves the storage issue but also the one of data protection. With Sentry's encryption data cannot be recovered unless connected to the Sentry it is registered with. What does that mean? If the module is stolen from your home, office or storage it is useless to the thief. Your data will not show up somewhere to be sold or used by **Identity Thieves** to commit financial crimes.

If you are business in California or have California residents as customers, your data is required to be encrypted to prevent identity theft. There are already bills before congress to make this a federal requirement as well.

You do not want to be the next business featured on 60 Minutes for failing to safeguard privileged and confidential information.
